

Endavo Media Management System (EMMS) – Release Notes

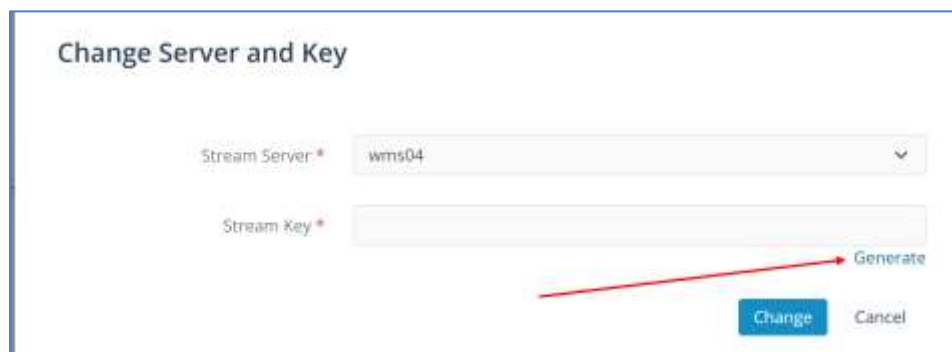

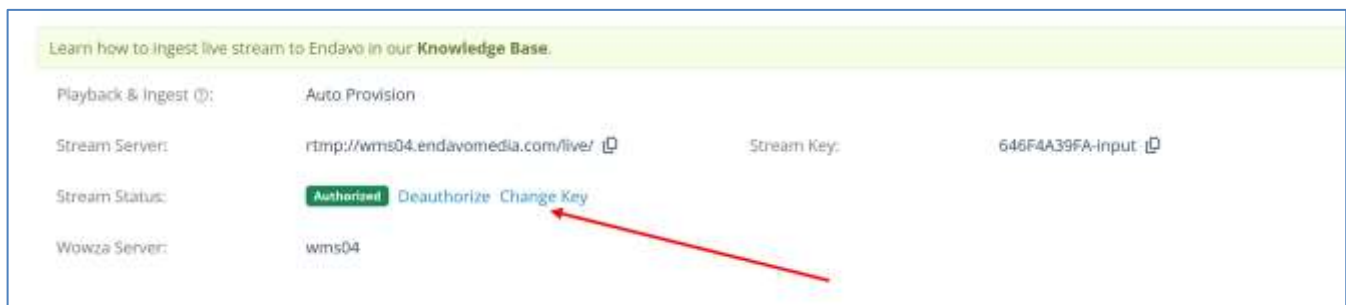

Release Date: July 30, 2026

This release expands live streaming controls for administrators, improves Virtual Live scheduling workflows, adds new member integration capabilities, and introduces foundational support for Google Play payments.

New & Updated Features

Manual Stream Key & Server Controls for Live Events

Super Admins and Group Admins can now manually change the stream key and stream server for Live Events (LE) and Virtual Live Events (VLE). This provides greater flexibility when an account's default stream key is already in use during overlapping scheduled events. Admins can also copy and reuse a single stream key across multiple sequential events, such as multi-day or daily productions, allowing production crews to configure their local encoding software once instead of changing credentials for each event.

VLC & VLE Scheduler Workflow Improvements

Scheduling Virtual Live Channels (VLC) and Virtual Live Events (VLE) is now more intuitive.

- 1) Dragging and dropping an event from the sidebar directly over an existing scheduled item places the new item immediately after the existing without creating a gap in between items.
- 2) When zoomed into a specific hour, double-clicking media in the sidebar now adds it to the first available slot within that hour rather than the first open slot across the entire schedule.

Category Search Dropdown Fix

Resolved an issue that prevented empty categories from appearing in the category dropdown when searching and filtering media lists in EMMS.

Google Play Payment Gateway

Added platform support for the Google Play payment gateway as part of Endavo's expanding mobile and connected TV monetization capabilities. Google in-app purchase (IAP) functionality remains in development and will be enabled in a future release.

Member Registration & Update Webhooks

New webhooks are now available for member registration and member profile updates, enabling external systems and integrations to respond automatically when members are created or their information changes.

If you have any questions about these updates or would like assistance using the new features, please contact our support team.
